

Glyco-San® - EPA Registered Disinfectant

Bulletin 2009 / 012
December 2009

We are pleased to announce that after a lengthy approval process, Celeste's Glyco-San has now been accepted by the US Environmental Protection Agency (EPA) as a Registered Disinfectant specifically designed for on-board potable water tanks and components, including pipes, plumbing fixtures, water trucks, carts and hoses, even coffee makers.

When used as recommended, Glyco-San® is an effective disinfectant against Staphylococcus aureus, Salmonella enterica and Escherichia coli.

To comply with the new EPA Regulations for water quality on board aircraft, a robust potable water program is of paramount importance. Glyco-San® has already proven itself as an effective cleaner, removing mineral and scale buildup – and any trapped bacteria or organic matter contained inside. With certification as a registered disinfectant, the product simultaneously disinfects while cleaning.

How Does This Fit With Celeste's Potable Water Program Options?

Celeste has always recommended that the three elements of a robust potable water program consists of Cleaning, Disinfection and Water Preservation, with Cleaning and Disinfection carrying the most weight. This remains unchanged – we simply have more options available today:

ELEMENT	OBJECTIVE	CELESTE OPTIONS
Clean & Disinfect	Cleaning of the potable water tank & system to remove mineral and scale buildup, and trapped bacteria / organic matter.	Celeste Glyco-San® at 1:3 mix ratio
Disinfect Only	Disinfection of the potable water tank & system to kill bacteria.	Celeste Glyco-San® at 1:7 mix ratio OR Celeste Puritab™
Preserve	Preservation of water quality to minimize bacteria reproduction and, as a result, additional scale and mineral buildup.	Celeste Safe Water Filters Celeste Taste & Odor Tabs

For more information on how to incorporate Glyco-San into your Potable Water Program, please contact your Account Manager or Sales Coordinator.
